Senior Software Engineer | AI Engineering | Architecture and Modernization

Professional Summary

Senior software engineer and independent consultant with 15+ years of experience building, maintaining, and modernizing production software. Work spans backend systems, legacy applications, architecture, infrastructure, and AI-assisted development.

Recent paid work includes software-engineering benchmarks, verifier development and auditing, AST-based codebase retrieval, enterprise document RAG, and MCP services. Experienced in taking unfamiliar systems from discovery through production change and delivery.

Core Strengths

- AI engineering: RAG, LangChain, LangGraph, FastMCP, vector databases, benchmark engineering, deterministic verifiers, trajectory analysis, model evaluation, OpenTelemetry, Langfuse
- Software and architecture: Python, Django, FastAPI, Flask, PHP, Laravel, Drupal, APIs, application/integration/data architecture, legacy modernization, CI/CD, testing
- Platforms and delivery: Pinecone, Qdrant, Docker, Kubernetes, GitHub Actions, CircleCI, Azure-hosted BI, Power BI, Microsoft Fabric, Linux

Recent Consulting and Selected Projects

Software Engineering Consultant - Self-Employed

Independent consultant | Remote | 2024 - Present

- Create novel backend benchmark tasks and custom environments; write and audit deterministic verifiers; evaluate generated code, model trajectories, test results, benchmark validity, and verifier gaming. Client and project names are confidential.
- Built AST-based retrieval across source code, documentation, VCS history, and Jira. Used Qdrant for a local MVP, Pinecone in production, FastMCP for agent tools, and LangGraph for issue triage and initial remediation work.
- Designed an enterprise RAG pipeline for approximately 140,000 Office documents using LDAP-controlled ingestion, Qwen3-Embedding-0.6B, Pinecone, BGE-M3 reranking, FastMCP, and end-to-end observability.
- Build authenticated MCP services with LDAP or OAuth, failure handling and backoff, approval controls, and OpenTelemetry/Langfuse diagnostics; lead architecture reviews and mentor engineering teams.

Drupal 6 to Django 4.2 Modernization

Consulting engagement | Confidential client | Selected project

- Reverse-engineered a heavily customized Drupal 6 multisite platform and migrated it to Django 4.2, covering custom modules, Drupal-core changes, ACLs, LDAP/AD/SSO, hundreds of thousands of users, and substantial content migration.
- Planned field mappings and Django migrations, ran dry runs, and supported a load-balanced production cutover alongside a full platform redesign.

Professional Experience

Senior Software Engineer

A2 Hosting | Remote | 2019 - 2024

- Designed and implemented a Django bare-metal provisioning platform for automated OS installation, configuration, and application deployment.
- Owned ETL, analytics, and reporting after inheriting BI responsibilities; contributed to an Azure-hosted BI stack integrated with Power BI and Microsoft Fabric.
- Integrated billing and reporting features, reducing manual intervention by 60%; led design reviews, contributed to architecture, mentored engineers, and wrote internal documentation.

Dynamics 365 Consultant

Long-term contract | Remote | 2017 - 2019

- Delivered Dynamics 365 development and consulting; led a six-engineer team through delegation, project-manager coordination, mentoring, and hands-on implementation support.

Senior Software Developer

Xennsoft | Remote | 2016 - 2018

- Developed a white-label platform integrating WordPress and Magento; collaborated on Chef-based automated provisioning that reduced server deployment time by 40%.

Team Lead

44 Interactive | Sioux Falls, SD | 2014 - 2015

- Led planning, reviews, and delivery; built frontend JavaScript/CSS and backend PHP solutions, architected a custom MVC framework, and mentored developers.

Earlier Experience

Software Engineer II, Corrisoft - Lexington, KY | 2012 - 2013

Software Developer, Able Engine - Lexington, KY | 2010 - 2012

Call-center and mobile application development, Drupal solutions for multinational clients, architecture/design collaboration, deployment, and Linux system administration.

Technical Skills

AI: RAG, LangChain, LangGraph, FastMCP, Pinecone, Qdrant, Chroma, pgvector, MongoDB, PyTorch, scikit-learn, Qwen3-Embedding-0.6B, BGE-M3, OpenTelemetry, Langfuse, Prometheus, ClickHouse, Ollama, n8n

Engineering: Python, Django, FastAPI, Flask, PHP, Laravel, Drupal, JavaScript, REST APIs, Docker, Kubernetes, GitHub Actions, CircleCI, Chef, Git, Bash, Linux, macOS, Windows

Education

Dakota State University | Coursework toward a B.S. in Computer Science, AI/ML concentration. Studies currently on hold following relocation to Spain; degree not completed.

Availability

Valencia, Spain (CET) | B2B contractor for international clients | daily four-hour overlap with U.S. business hours
